

# POLAR INSULATED CONTAINERS

## ***Polar Box Features***

- All units constructed using USDA/FDA approved materials
- Superior linear low density polyethylene with melt blended coloration for superior cold temperature impact resistance
- Double wall design
- Walls are filled with polyurethane foam for strength and insulation
- Inner surfaces are smooth and easy to clean
- Polyethylene can be steam cleaned (short bursts)
- Wide variety of sizes available

**W**hen it comes to transporting and storing temperature-sensitive food products, Polar insulated containers have proven most efficient. Portable insulated containers by their very nature get transported a lot and they take a beating in the process. Polar boxes are roto-molded from tough polyethylene with a smooth outer shell devoid of joints. With two inches minimum of foam insulation between double walls, Polar insulated containers provide the nearest thing to the perfect shipping/storage container.
